## NEON COLORED SWITCH SEALING BOOTS

Englewood, NJ - June 30, 2008 -- APM HEXSEAL announced today the availability of neon colored switch, potentiometer, and circuit breaker sealing boots. Yellow, orange, pink and green are the four neon colors being offered at slightly higher cost than the basic black and grey which are traditionally offered as part of our UL Recognized HEXSEAL®, E-SEEL® and IQ™ sealing boot lines. The new neon colored silicone boots provides the same high-performance rated to IP66/68 with environmental protection against hostile contaminants: salt-spray, ice-build-up, sand, dust, dirt, sunlight, ozone, fungus and most solvents and lubricants. Mr. John Arnold, National Sales Manager, stated: "there is an increasing trend for colored toggle, pushbutton and rocker sealing boots, driven by the desire of control panel designers to aesthetically match panel and instrument colors and to indicate equipment operational function. The availability of these neon colors extends APM's ability to match to any specific color specifications."

**About the APM HEXSEAL Electronics Division** -- For more than sixty years, APM HEXSEAL has specialized in developing product sealing solutions for electrical/electronic components used in military, marine, medical, process plants and construction equipment, including a wide range of industrial and commercial products. Other divisions produce reusable, high-pressure, self-sealing and locking fasteners and custom dynamic seals.
